

Transboundary Aquifers of Latin America

Legend

Occurrence and extent

- aquifer
- overlapping areas
- small aquifer

Type of delineation

- confirmed boundary
- approximate boundary

Geographic elements

- countries
- rivers
- lakes

Prepared by IGRAC
scale: 1: 50,000,000

Base maps
Country borders: ESRI World Country (April, 2014)
Rivers and lakes: ESRI (2009)

Map projection
Robinson projection, geographic coordinates,
spheroid WGS84, longitude of central meridian 0°.

About this map
This map is a cutout of the Transboundary Aquifers of the World Map 2015. Details on the procedures for preparing this map are described in: IGRAC (International Groundwater Resources Assessment Centre), UNESCO-IHP (UNESCO International Hydrological Programme), 2015. Transboundary Aquifers of the World [map]. Edition 2015. Scale 1 : 50 000 000. Delft, Netherlands: IGRAC, 2015.

Disclaimer
Any designation employed and the presentation of material throughout this publication do not imply the expression of any opinion whatsoever on the part of IGRAC, UNESCO, WMO or the Government of the Netherlands concerning the legal status of any country, territory, city or area, nor of its authorities and sovereignty on its territory and natural resources, and delineation of its frontiers or boundaries. Furthermore, the location and boundaries of several transboundary aquifers have not yet been confirmed by representatives of all countries involved. In such cases, an effort was made to indicate on the map the corresponding provisional status.

Preferred citation
